

primeiro slide

MY NAME IS GABRIELLY, I'M 18 YEARS OLD AND I LIKE ART.

I have TAKEN THE ENGLISH AND GRAPHIC DESIGN COURSE for the past 3 YEARS.

segundo slide

what is graphic design

Is the area of knowledge and professional practice that creates visual content with the aim of communicating ideas.

The graphic designer uses fonts, images, illustrations, animations and infographics to produce graphic pieces

terceiro slide

I'm going to talk a little bit about the software I learned in the course, being Illustrator, Photoshop and After Effects

about adobe illustrator

Adobe Illustrator is a vector image editor.

He is widely used by graphic designers, illustrators and digital artists to create specific graphics, which are scalable images that can be resized without loss of quality.

the project

In this project I just wanted to make a stream layout for my friend, initially I wanted simple shapes and I didn't need to add colors yet

about photoshop

It is considered the leader in the professional image editor market, as well as the de facto program for professional editing of digital images and prepress work.

art

In this art, I just knew I wanted a highlight coming from behind the character and the doll in his hand.

about after

He has a large number of tools that allow the user to create animations, perform interventions on videos, add or remove elements from the scene. So you can create artificial visual and special effects.

This last project I did thinking about creating art to test photo animation

I used the "pins" tool and selected the parts

I wanted to move, as I was doing it I noticed errors and went back to ps and created a

"back layer" where I would move, the eye is an example.

agradecimientos

I would like to thank all my teachers and colleagues for helping me and
I would especially like to thank my parents for providing me with the
course.
